NAME: DULAM ANVESH GOUD BRANCH: CSE(AI&ML)

REGD ID: 25BAI10595 COURSE-CODE: CSE0001

COURSE-TITLE: DIGITAL LITERACY

DATE:25-03-2026

BATCH:2025-2029

TASK-1 – Digital Literacy Awareness Infographic

For this task I created a one-page infographic on Digital Literacy Awareness using Canva. I chose Canva because it is free, browser-based and has many ready-made templates that made it easier to start designing without any prior graphic design experience.

My infographic covers four main topics. The first section explains what digital literacy actually means and why it matters for students today. The second section lists useful digital tools like Google Workspace, Canva, Grammarly and Zoom that help with studying and collaboration. The third section focuses on safe internet practices such as using strong passwords, enabling two-factor authentication and avoiding suspicious links. The fourth section talks about building a professional online presence through platforms like LinkedIn.

The most difficult part for me was adjusting the images and text together on the same slide. Whenever I moved an image, the text alignment would get disturbed and I had to reposition everything again. Another challenge was choosing the right font size because some text looked too small on certain sections and I had to resize it multiple times. Fitting all four topics on a single page without making it look too crowded was also tricky. Overall it was a good learning experience and I now feel more comfortable using design tools.

TASK-2-Platforms Chosen for Academic and Professional Growth:

REPORT

For my continuous learning and development in the field of Artificial Intelligence and Machine Learning, I have selected three important platforms: **GitHub**, **LinkedIn**, and **Kaggle**.

GitHub is my primary platform for version control and project hosting. It allows me to store, manage, and showcase all my AI/ML projects, assignments, and code repositories. Over the next four years, I plan to actively use GitHub to build a strong portfolio by uploading clean, well-documented projects such as LLM applications, computer vision models, and end-to-end ML pipelines.

LINK:https://github.com/anveshdulam/DULAM-ANVESH-GOUD

LinkedIn serves as my professional networking platform. It helps me connect with seniors, professors, industry experts, and fellow AI enthusiasts. I will use it to share my project updates, certifications, and internship experiences. My goal is to grow my network and stay updated with the latest opportunities in AI & ML.

Kaggle is my go-to platform for practical learning and competitions. It provides real-world datasets, notebooks, and competitions that help me improve my data science and modeling skills. In the coming years, I aim to participate regularly in competitions, learn from top kernels, and gradually move from beginner to intermediate level.

Together, these three platforms will play a key role in building my technical skills, professional presence, and project portfolio throughout my B.Tech journey at VIT Bhopal.

TASK-3-Platforms and Tools Used for Skill Development

Part A – Coding Practice For the coding practice task, I created an account on **HackerRank**. I chose HackerRank because it is beginner-friendly and widely used by students for improving programming skills. I completed the classic beginner challenge **"Solve Me First"** in Python. This simple problem helped me understand the platform's interface, how to write code in the editor, run test cases, and submit solutions. I took a screenshot of the successful submission along with the score and saved it in the task-3-platforms.

Part B – Google Workspace Collaboration I used **Google Forms** and **Google Sheets** to create a "Digital Literacy Awareness Quiz" with exactly five questions for my batchmates. The quiz included three multiple-choice questions (on digital literacy, password safety, and phishing), one short answer question (about checking credibility of information before sharing), and one linear scale question (confidence in identifying fake news). After designing the form, I linked it to a Google Sheet to automatically collect and view all responses in a

clean tabular format. Screenshots of the form and the linked response sheet have been added to the task-3-platforms/ folder.

These platforms and tools will greatly support me academically over the next four years. HackerRank will help me regularly practise coding, improve problem-solving skills, and prepare for technical interviews and coding competitions. Google Workspace tools (Forms and Sheets) will be useful for creating surveys, collecting feedback for group projects, organising AI/ML study sessions, and collaborating efficiently with teammates and faculty. Together, they will help me build strong technical skills, maintain good documentation, and develop better collaboration habits during my B.Tech in CSE (AI & ML) at VIT Bhopal.

Task-4-Email-Etiquette

In 2013, a senior communications employee at a major international PR firm posted a tweet just before boarding a flight that read: "Going to Africa. Hope I don't get AIDS. Just kidding. I'm white." She had only around 170 followers and assumed few people would see it. By the time her plane landed hours later, the tweet had gone globally viral, she had been publicly condemned by thousands, and her company had already issued a public apology and terminated her employment. Her career was effectively destroyed in the time it took to cross an ocean.

What could have been done differently is straightforward — she simply should not have posted it. More broadly, this case is a reminder that no online audience is ever truly small, that tone and context collapse entirely in text, and that a two-second decision on a screen can carry permanent, real-world consequences.

TASK-5- Cybercrime Awareness Case Study & Prevention Guide

What surprised me most while researching this topic was how effortlessly ordinary a UPI fraud attack actually is. I had always imagined cybercrime as something technically complex — hackers in dark rooms writing elaborate code. The reality is far more unsettling: a fraudster needs nothing more than a phone, a fake name, and basic knowledge of how UPI collect requests work. The victim does all the "work" themselves, simply by not knowing that a PIN means money leaves, not arrives. That gap between how confident we feel using these apps daily and how little we actually understand them is where the crime lives.

The one habit I will personally change is this — I will never act on any payment request under time pressure. Urgency is the weapon. From now on, the faster someone tells me to hurry, the slower I will move.
